

2011 F-150 3.5L Ecoboost - Service Oil Filter Information

All 2011 F-150 trucks equipped with a 3.5L Ecoboost engine were produced with a small diameter (77 mm/ 3 in) oil filter.

The service replacement oil filter (FL-2055) is a larger diameter (94 mm/ 3.75 in) filter. The FL-2055 has significantly higher filtration efficiency and capacity than most other oil filters and is designed for added engine protection and long life.

For proper engine maintenance, an FL-2055 oil filter, or an equivalent filter meeting Ford material and design specifications, must be used.

If a replacement oil filter is installed that does not meet Ford specifications, engine damage may occur which may not be eligible for warranty coverage.

The oil capacity for the 3.5L V6 Ecoboost engine with the FL-2055 oil filter is 6.2 quarts (5.9L).
